

DLF ALFALFA

DLF Alfalfa is the forage solution for you who want save to money, improve milk production and support long-term sustainable farming - now and in the future!

- Increased self-sufficiency with 18-20% protein content
- Higher feed-conversion rate and improved digestibility with increased milk production
- No need to fertilise as DLF Alfalfa provides N-fixation of up to 250 kg/ha/year
- N-fixation increases yield in subsequent crops by up to 5%
- Deep rooting system helps maintain or even increase feed production during dry periods
- High nutritional value with essential fibres, nutrients and vitamins give healthy animals
- Sustainable and good for the environment

Start growing your return today!

Combine DLF Alfalfa with grass for optimal energy-to-protein ratio

DLF Alfalfa thrives well in a mixture with forage grasses. With a field composed of DLF Alfalfa and forage grasses, you achieve an optimal ratio of energy to protein. Furthermore the deep rooting system helps maintain or even increase feed production during dry seasons.

Science improves DLF Alfalfa

It is now easier for you as a farmer to grow a successful alfalfa crop as DLF plant breeders have continually improved the performance of our alfalfas.

Our DLF Alfalfa breeding programme has made good progress and has improved yield, protein content, disease tolerance, persistency, standability and digestibility.
